## ROS2 강습회

대한기계학회 IT융합부문 명지대학교 최동일 dongilc@mju.ac.kr

2023. 08. 11

# 4교시

Github와 오픈소스 프로그램 활용 실습

### Tetrix 기본

TETRIX® MAX Programmable Robotics Set

- User Guide

https://asset.pitsco.com/sharedimages/resources/tetrix-prizm-programming-guide.pdf

- WebPage
   https://www.pitsco.com/TETRIX-MAX-Programmable-Robotics-Set
- Arduino Library https://www.pitsco.com/sharedimages/resources/TETRIX\_ PRIZM\_080219.zip
- FT232R usb uart driver https://ftdichip.com/drivers/

```
readEncoderCount(enc);
                                                                      /dev/ttyUSB0
 #include <PRIZM.h>
  PRIZM prizm;
 void setup() {
    prizm.PrizmBegin();
                                     ■ Autoscroll Show timestamp

    115200 baud
    Clear output

    Serial.begin (115200);
  void loop() {
    long eCount= prizm.readEncoderCount(1);
    Serial.println(eCount);
```

**Arduino Program < readEncoderCount.ino >** 

readEncoderDegrees(enc);

Serial.println(eCount);

```
#include <PRIZM.h>

PRIZM prizm;

void setup() {
    prizm.PrizmBegin();
    Serial.begin (115200);
}

void loop() {
    long eCount = prizm. readEncoderDegrees(1);
```

**Arduino Program < readEncoderDegrees.ino >** 

#### setMotorPowers(power1, power2);

```
#include <PRIZM.h>
PRIZM prizm;

void setup() {
   prizm.PrizmBegin();
   prizm.setMotorInvert(1,1);
}

void loop() {
   prizm.setMotorPowers(35,35);
}
```

- 모터의 파워로 제어
- 배터리 전압에 따라 속도 변화
- 엔코더 사용 X

**Arduino Program < setMotorPowers.ino >** 

```
setMotorSpeeds(speed1, speed2);
```

- 일정한 속도값으로 제어
- 엔코더 사용 〇

```
#include <PRIZM.h>
PRIZM prizm;

void setup() {
  prizm.PrizmBegin();
  Serial.begin (115200);
}

void loop() {
  prizm.setMotorSpeeds(50, 50); //degree per seconds
}
```

**Arduino Program < setMotorSpeeds.ino>** 

#### Data Format: \$speed1,speed2

```
#include <PRIZM.h>
PRIZM prizm;

float right, left;

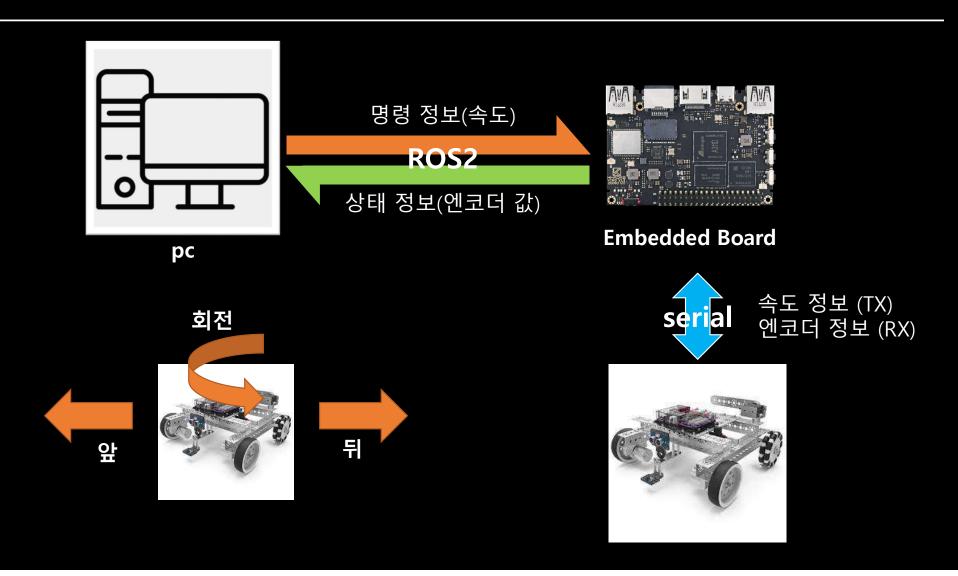

void setup() {
    Serial.begin(115200);
    Serial.setTimeout(10);
    prizm.PrizmBegin();
    prizm.setMotorInvert(1,1);
}

void loop() {
}
```

Arduino Program < ros2\_tutorial\_2023\_ch4\_arduino.ino>

```
void serialEvent(){
  if(Serial.read() == '$') {
    String data = Serial.readStringUntil('\n');
    int first = data.indexOf(",");
    int length = data.length();
    String vel = data.substring(0, first);
    String ang = data.substring(first+1,length);
    float vel 1 = vel.toFloat();
    float vel 2 = ang.toFloat();
    if(vel 2==0) prizm.setMotorSpeeds(vel 1,vel 1);
    else {
     if(vel 2>0) prizm.setMotorSpeeds(vel 2,-vel 2);
                  prizm.setMotorSpeeds(vel 2,-vel 2);
      else
    Serial.print(prizm.readEncoderCount(1));
    Serial.print(",");
    Serial.println(prizm.readEncoderCount(2));
  else Serial.println(-1);
```

## Tetrix 제어흐름도

감사합니다.
